

About Us

About Granite Mountain - Arkansas Business did a write up on us and our story a couple of years ago. I think reading this independent view of us will tell you more about us than we could ever say: Read it here:

http://findarticles.com/p/articles/mi_hb5248/is_42_25/ai_n31444341/

We Believe:

-

You are not paying for backup – you are paying for recovery. Your vendor must have a comprehensive recovery process in place – not just cheap offsite backup of data

-

Business Continuity is your ultimate goal.

Your backup files should be recoverable in a Business Continuity Server – with Virtualization Capabilities.

-

Your backups should be recoverable from a minimum of three geographically dispersed facilities.

Example: Did you know that the terrorist bombing of the World Trade Centers in 1993 shut down the ATM secure datacenter in New York City – this datacenter powered ATMs for every system east of the Mississippi River. The failover site, in rural Pennsylvania picked up operations for about an hour. Then the worst snow storm in 100 years struck the rural Pennsylvania town causing the roof structure of the failover datacenter to collapse – yes, effectively crashing ATMs nationwide.

Granite Mountain Data Backup, LLC

500 President Clinton Ave., Suite 304
